The global Hybrid EGR System market size is predicted to grow from US$ 922 million in 2025 to US$ 1928 million in 2031; it is expected to grow at a CAGR of 13.1% from 2025 to 2031.

The hybrid EGR system is an emission control technology designed specifically for hybrid vehicles. Its main function is to recirculate part of the exhaust gas into the intake system during the engine combustion process to reduce the combustion temperature, reduce the generation of harmful gases such as nitrogen oxides (NO?), and improve the overall combustion efficiency of the engine. For hybrid systems, due to the coordinated work of the internal combustion engine and the electric motor and the frequent engine start and stop, the traditional EGR system faces higher requirements in controlling emissions and maintaining combustion stability; therefore, the hybrid EGR system not only needs to work efficiently under low load and low temperature conditions, but also needs to be closely integrated with the vehicle's energy management system to achieve intelligent control and fine adjustment.

United States market for Hybrid EGR System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Hybrid EGR System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Hybrid EGR System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Global key Hybrid EGR System players cover BorgWarner, Rheinmetall Automotive, Vitesco Technologies, Korens, Valeo, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2024.
