Hybrid eVTOL Aircraft that use multiple fuel systems, often incorporating fossil fuels, to achieve increased flight range. Typically, propulsion systems remain electric.

Energy density limitations on current battery technology represent limited use cases for other electric only VTOL aircraft, presenting substantial regulatory hurdles for certifications requiring minimum flight time. Battery only eVTOL also face constraints due to reliance on good weather. Hybrid technology provides for greater range, longer distances, more passenger capacity, lower environmental impact, and easier adoption.

The global Hybrid eVTOL Aircraft market size is projected to grow from US\$ 26.6 million in 2024 to US\$ 462 million in 2030; it is expected to grow at a CAGR of 61.0% from 2024 to 2030.
