A hybrid fan is a fan installed in a commercial air conditioner.

Conventional fans always rotate at a constant speed and consume more energy than necessary. Hybrid fans, however, use sensors to detect environmental conditions such as room temperature and humidity, and are controlled to operate at the optimal airflow rate. This enables comfortable air circulation with a minimum amount of energy required.

In addition, because they are easy to install and convenient to use regardless of the season, such as summer or winter, they are increasingly being used in offices and stores.

The global Hybrid Fan market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
