The global Hybrid Passenger Vehicle Exhaust System market size is predicted to grow from US\$ 2355 million in 2025 to US\$ 4167 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

The exhaust system for hybrid passenger vehicles is a specialized exhaust treatment and muffler system designed for the internal combustion engine operation of hybrid electric vehicles. It consists of an exhaust manifold, a three-way catalytic converter, a muffler, exhaust piping, and related sensors. Its core function is to efficiently purify exhaust gases and control noise and vibration under conditions of intermittent engine start-stop, frequent hot-and-cold switching, and low-load operation. Compared to traditional gasoline vehicles, hybrid vehicle exhaust systems place greater emphasis on rapid warm-up, low-temperature emission control, and thermal shock resistance to address the issue of concentrated emissions during short engine starts. Simultaneously, it must be highly compatible with the electric drive system and energy management strategies to ensure compliance with increasingly stringent emission regulations without compromising overall vehicle NVH performance and fuel economy. In 2025, the average price of a hybrid passenger vehicle exhaust system was approximately \$275 per unit. The upstream components of a hybrid passenger vehicle exhaust system include the exhaust manifold, piping, three-way catalytic converter, muffler, and sensors. The industry average gross profit margin is approximately 10%-15%.
