Hybrid power systems combine two or more energy technologies to increase system efficiency. For example, a battery energy storage system (BESS) can be combined with a diesel generator or solar panels.

The BESS acts as a dynamic energy reservoir and power provider. It efficiently accumulates excess energy generated by the solar panels or surplus power produced by the generator. When the battery is full, the system discharges the stored energy to ensure a stable and continuous power supply.

The global Hybrid Solar Power Residential System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
