Hybrid Spider Cranes are a type of crane that combines two or more power sources, usually diesel and electric, to provide power for their operation. They are named 'spider' cranes because their four outriggers, when extended, resemble the legs of a spider. These cranes are designed to be compact and maneuverable, enabling them to work in confined spaces where large cranes cannot access. The hybrid power system offers several advantages, such as reduced fuel consumption, lower emissions, and quiet operation. It allows the crane to switch between diesel and electric power depending on the working conditions and requirements, providing greater flexibility and efficiency. Hybrid Spider Cranes are widely used in various industries, including construction, maintenance, and indoor installation, where they can handle lifting tasks with high precision and reliability.
