A hybrid storage server is a combination of a physically-hosted server with the virtualization technology. A hybrid storage server provides advantages of a dedicated server and cloud computing. Cost of a hybrid storage server is lower than that of a dedicated server. The hybrid storage server is an ideal solution for hosting high-traffic websites, e-commerce systems, content management systems, databases, and file storage. Moreover, it offers automated services on demand through an API (application programming interface). The hybrid storage server is capable of managing hybrid workloads such as customer relationship management (CRM), test and development, document management, and human resource management (HRM).
