Hydrargyrum medium-arc iodide lamp (HMI) is a high-intensity gas discharge lamp, which is a type of metal halide lamp. Dysprosium lamps are made by filling the lamp tube with dysprosium iodide, dysprosium oxide, thallium iodide, mercury, rubidium and other substances, and discharge and emit light under a certain pressure. Its main working substances include dysprosium and dysprosium oxide. When these substances are discharged in the lamp tube, they produce a dense spectrum, which is close to the solar spectrum, thus improving the luminous efficiency and color rendering. As a new type of gas discharge light source with high efficiency and high color rendering, the HMI lamp has shown strong application value and market potential in many fields.
