The global Hydrated Lime market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Hydrated lime is a colorless crystal or white powder and is produced when quicklime (calcium oxide) is mixed with water.

The exponential growth of the global population is causing a shortage of drinking water. According to the World Health Organization (WHO), nearly one-third of the population lacks access to safe drinking water. Coupled with alarming levels of water pollution, rising water treatment volumes are strengthening the growth of the slaked lime market. The cost-effectiveness of slaked lime makes it ideal for increasing the alkalinity of water and inhibiting the growth of microorganisms, which contributes significantly to the growth of the industry. Additionally, slaked lime is also used as a sludge stabilizer and sludge conditioner to filter industrial and domestic waste, thereby contributing to the growth of the industry. Strong growth in the construction industry is aiding the market growth. The increasing use of slaked lime in soils on construction sites due to its increased bearing capacity, stability, and impermeability of the soil is driving the market growth. It also reacts with clay mineral surfaces, reducing plasticity and moisture retention while enhancing stability and setting. In turn, this has increased its application in the construction industry, thereby boosting the growth of the market.
