Abstracts

The global Hydrated Salt Phase Change Material market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Hydrated salt phase change materials, as a type of inorganic phase change materials, mainly refer to inorganic salts containing crystalline water. These salts lose crystalline water when heated, changing from solid to liquid or gaseous state, and absorb a large amount of heat energy in the process; when the temperature drops, they reabsorb crystalline water, change from liquid or gaseous state back to solid state, and release the previously stored heat energy. This phase change process is accompanied by the storage and release of energy, which makes hydrated salt phase change materials have a wide range of application potential in the fields of thermal energy storage, temperature regulation, etc.

Hydrated salt phase change materials can be divided into several categories according to their heat storage capacity, such as less than 150 kJ/kg, 150-200 kJ/kg, 200-250 kJ/kg, 250-300 kJ/kg and more than 300 kJ/kg. Among them, products with a heat storage capacity of 150-200 kJ/kg occupy an important position in the market and are expected to maintain or increase their market share in the next few years. Hydrated salt phase change materials are widely used in many fields such as construction, cold chain transportation, air conditioning, and energy storage. Especially in the field of construction, its application prospects as an energy storage material are broad, which helps to improve the energy efficiency and comfort of buildings. With the advancement of science and technology and the increase in R&D investment, hydrated salt phase change materials will continue to be optimized and improved in terms of performance, stability, cost, etc. This will help broaden its application areas and enhance market

competitiveness. In summary, the hydrated salt phase change material market is in a rapid development stage with broad application prospects and market potential.
