A hydraulic accumulator is a device, typically made of steel, which is divided into two separate chambers. The upper chamber contains fluid at system pressure, while the lower chamber is charged with nitrogen or air. Cylindrical types are also used in high-pressure hydraulic systems. Many aircraft have several accumulators in the hydraulic system. There may be a main system accumulator and an emergency system accumulator. There may also be auxiliary accumulators located in various sub-systems.

Accumulators provide backup power for brakes, landing gear, emergency applications, and APU starting. They are also used as system dampers, absorbing pressure spikes in hydraulic systems with large volumetric output piston pumps.

The global market for Hydraulic Accumulators for Aircraft is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.
