The global Hydraulic Circulation Valve market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The hydraulic circulation valve can be used not only as a packer upper bypass, but also as a circulation valve to circulate the formation fluid in the pipe string after logging. When connected below the tester, it can be used as a bypass for the packer to help slow the pressure rise below the tester when the production packer is inserted. When connected above the tester, it acts as a recirculation valve when the work string is lifted.
