A Hydraulic dehorner is a device that uses hydraulic principles and is specifically designed to remove the horns of livestock such as cattle. This tool performs the dehorning operation using pressure provided by a hydraulic system. Typically, a Hydraulic dehorner works by transferring fluid pressure to the head or clamp of the tool in order to create enough force at the base of the horn to cause the horn to disengage or be removed. Hydraulic dehorner typically include a hydraulic pump and a clamp or cutting head connected to it. Methods that use hydraulic force rather than electricity or flame help control the dehorning process, reducing possible damage or discomfort. This equipment is used in agriculture and animal husbandry to improve the safety and efficiency of livestock management.

The global Hydraulic Dehorner market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
