## Abstracts

The global Hydraulic Dry Powder Briquetting Machine market size is predicted to grow from US\$ 1084 million in 2025 to US\$ 1496 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

A hydraulic dry powder briquetting machine is a device that uses a hydraulic system to provide high, controllable pressure, directly pressing difficult-to-form dry powder or fine granular materials into high-density blocks (or balls). Through forced pressurization, pre-compression, and double-roll forming, it densifies metal powders, mineral powders, chemical powders, carbon materials, etc., with little or no binder, significantly improving material handling, furnace charge utilization, and recycling value, while reducing dust and environmental emissions. The average price of this product is approximately US\$160,000 per unit, with global sales of approximately 6,900 units.

The mineral powder briquetting machine industry chain presents a complete upstream and downstream collaborative pattern: the upstream relies on raw materials such as mineral powder, fine metal powder, and chemical powder, as well as hydraulic systems, wear-resistant roller molds, controllers, and sensors. Key parameters are concentrated on powder moisture content, particle size distribution, and target density. The midstream consists of complete machine manufacturers and system integrators, covering feeding, batching, dust removal, screening, and packaging. Machine power ranges from 55 to 400 kW, and engineering cases for different capacity segments emphasize high-pressure stability and mold life. The downstream is applied in steel metallurgy, mining, chemical building materials, and environmental recycling. Procurement demand focuses on unit capacity (2.2–50 t/h), molding strength, and dust control synergy. The overall trend is towards low carbon and resource utilization. The market prefers high-pressure densification, automated production lines, and cost

visibility. Equipment prices are affected by machine size, roller material, and hydraulic system specifications.
