The global Hydraulic Engine Starting System market size is predicted to grow from US\$ 1264 million in 2025 to US\$ 1499 million in 2031; it is expected to grow at a CAGR of 2.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

This report focus on Hydraulic Engine Starting System market.

A starter (also self-starter, cranking motor, or starter motor) is a device used to rotate (crank) an internal-combustion engine so as to initiate the engine's operation under its own power. Starters can be electric, pneumatic, or hydraulic. In the case of very large engines, the starter can even be another internal-combustion engine.

Some Diesel engines from six to 16 cylinders are started by means of an hydraulic motor. Hydraulic starters and the associated systems provide a sparkless, reliable method of engine starting over a wide temperature range.

Hydraulic starting's major advantage: by cranking engines faster at a higher torque, the engines start more quickly. The instant availability of torque is particularly effective in cold weather. In addition, elimination of electrical connections (coupled with the availability of beryllium copper gears) results in sparkproof starter operation.
