## Abstracts

The global Hydraulic Extrusion Press market size is predicted to grow from US\$ 678 million in 2025 to US\$ 1017 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

A hydraulic metal extrusion press is a type of metal forming equipment that uses a hydraulic system to provide extrusion force. It extrudes heated or room-temperature metal billets under high pressure through an extrusion cylinder, extrusion rod, and die. It is used to produce aluminum profiles, copper tubes and bars, magnesium alloy profiles, titanium alloy bars, and high-strength irregularly shaped cross-section parts. It is widely used in building profiles, rail transportation, automotive lightweighting, aerospace, power electronics heat dissipation structures, industrial tubing, and high-end equipment components. Global sales in 2025 were approximately 1,650 units, with an average unit price of approximately US\$420,000 and a capacity utilization rate of approximately 71%. Upstream suppliers mainly include suppliers of thick plates and forgings, steel structures and machined parts, hydraulic pumps, valves and cylinders, seals, servo motors and frequency converters, industrial control systems, sensors and safety interlocks, as well as extrusion dies and heat treatment auxiliary equipment. Downstream suppliers include aluminum and industrial profile extrusion plants, copper processing and non-ferrous metal processing companies, aerospace and rail transportation component suppliers, and automotive component manufacturers. The power and electronic heat dissipation structural component manufacturer, as well as the equipment manufacturing and OEM system, has an industry gross profit margin of approximately 26%. In terms of product cost structure, steel structures and machined parts account for approximately 32%, hydraulic systems and cylinder pumps/valve systems for approximately 24%, electrical control and servo drives for approximately 12%, heating and cooling and auxiliary units for approximately 8%, assembly,

debugging and testing for approximately 9%, outsourcing and mold adaptation support for approximately 6%, logistics, installation and after-sales service for approximately 5%, and management and sales expenses for approximately 4%. Demand mainly includes expansion of aluminum profile production lines for construction and industrial applications; extrusion of lightweight aluminum alloy structural components; battery trays and anti-collision beam profiles for new energy vehicles; rail transit vehicle bodies and frame profiles; copper tubes, bars and profiles; and incremental applications of extruded parts in aerospace and high-end equipment. Downstream customers include leading aluminum profile groups, industrial aluminum extrusion plants, leading copper processing companies, automotive parts groups, rail transit and aerospace supply chain companies, and large non-ferrous metal processing park companies. Business opportunities stem from the promotion of high-end manufacturing and green low-carbon policies, the expansion of lightweight and high-strength material applications, and the higher energy efficiency and more stable forming quality brought about by innovations in servo hydraulics and digital control technologies. And the changing demands of end users for higher production capacity, lower energy consumption, less downtime, and faster mold changeover.
