The global Hydraulic Fracturing Fluid market size is predicted to grow from US$ 687 million in 2025 to US$ 856 million in 2031; it is expected to grow at a CAGR of 3.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Increasing shale gas and tight oil production: Hydraulic fracturing, also known as fracking, has been instrumental in the extraction of shale gas and tight oil. The market for hydraulic fracturing fluids has witnessed growth due to the expansion of these unconventional oil and gas resources.

Water-based fluids dominate the market: Water-based fluids have been the most commonly used type of hydraulic fracturing fluid. They typically consist of water mixed with proppants (sand or ceramic particles) and chemical additives. These fluids have accounted for a significant share of the market due to their effectiveness and relatively lower cost compared to other types.
