A hydraulic generator uses a hydraulic motor to replace the large, heavy, gas or diesel motor found on traditional generators. On average a hydraulic generator is 50% lighter and smaller; it's quieter, more reliable, virtually maintenance-free and there's no pollution or carbon exhaust.

Using the existing on-board power train, energy is transferred to the hydraulic generator through the hydraulic fluid. Because it's not limited by big diesel or gas engines, drive shafts or drive belts, you can put the hydraulic generator anywhere.
