Abstracts

The global Hydraulic Headbox market size is predicted to grow from US\$ 2455 million in 2025 to US\$ 3313 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

The hydraulic headbox is required mainly for medium and high speed machines for fourdrinier applications. The consistency and speed range is reduced if compared with a pressurized headbox but the quality formation is increased. A conical header distributes uniformly the pulp to a three stages step diffuser that is the most technological component because induces to the pulp the micro-turbulences necessary for the fiber mixing and the defloculation effect. Depending of paper grade and quality requirements we can offer a plastic three stage step diffuser (the third step has a circular shape) or as per alternative a stainless steel tube bank were the third step has a square shape.
