The hydraulic lotus catch is a mechanical device used for material handling and loading and unloading operations in the engineering and construction fields. Its design was inspired by the shape of a lotus flower, hence the name. Hydraulic lotus catches usually consist of multiple movable claws, each of which can be controlled to open and close by a hydraulic system. When it's time to grab an object, a hydraulic system applies pressure, causing the claws to retract and grip the object. And when it's time to release the object, the hydraulic system releases the pressure, allowing the jaws to spread and loosen the grip.

The hydraulic lotus catch has the following characteristics: multi-point grabbing, flexibility, load capacity, precise control, high efficiency, safety, and stability, which can improve work efficiency, reduce labor intensity, and adapt to different needs.
