## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Hydraulic recloser control is used in most single-phase reclosers and in some three-phase reclosers. It is built as an integral part of the recloser. With this type of control, an overcurrent is sensed by a trip coil that is connected in series with the line. A trip coil in series with the line is used to sense overcurrent and trip open the recloser contacts. The contacts close after a preset interval.
