The global Hydraulic Release Shackle market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A hydraulic release shackle is a device used to lift and position structures, which may be underwater or on the surface. It is primarily used in areas where direct human intervention is difficult in order to secure or release connections safely. These devices are used to install and decommission offshore/onshore structures by allowing the remote release and engagement of lifting rigging from the structure being raised. As technology advances, hydraulic release shackles are moving towards higher automation, greater precision, and a wider range of applications. Future systems are likely to rely more heavily on artificial intelligence and machine learning technologies to improve the safety and efficiency of operations.
