The hydraulic sausage filling machine is a machine that can fill different types of sausages. It is suitable for sausages of different types and flavors such as hometown sausage, ham sausage, minced meat sausage, red sausage, Cantonese sausage, etc. It is mainly composed of a frame, a hopper, a working cylinder, an oil cylinder, a hydraulic operating system and an electrical system. By operating a manual rotary valve to control the reciprocating movement of the piston, it completes the operations of suction and extrusion to achieve the purpose of continuous enema. The machine has two discharge pipes and a 50L large-capacity barrel, making sausage filling more efficient. At the same time, the hopper, valve, enema tube and the outer packaging of the entire machine are all made of stainless steel, which meets food hygiene

requirements.

With the advancement of science and technology, intelligence has become a trend for many industrial equipment, and hydraulic sausage filling machines are no exception. In the future, hydraulic sausage filling machines may be equipped with smarter control systems and more advanced sensors to achieve more precise control and more efficient production. At the same time, this may also improve the self-maintenance and protection capabilities of the equipment and reduce the failure rate.
