The global Hydraulic Surge Brake Actuators market size is predicted to grow from US$ 7012 million in 2025 to US$ 10310 million in 2031; it is expected to grow at a CAGR of 6.6% from 2025 to 2031.

Hydraulic Surge Brake Actuator systems work by the 'surge' or 'push' of the trailer toward the tow vehicle during deceleration which automatically synchronizes the trailer brakes with the tow vehicle brakes.

Significant decline in sales of automotive actuators amid shutdown of production facilities in key automotive markets in Europe and Asia poses a major challenge to automotive market players. To overcome this situation, manufacturers are focusing on research and development of integrated braking systems to ensure engine efficiency and fuel efficiency. This is expected to boost the sales of brake actuators over the forecast period. The global demand for automotive actuators will surge as they are used in many applications involving machinery.
