The hydraulic tool holder is a high-precision tool chuck that uses hydraulic media to force the deformation element to elastically deform uniformly in the 360° circumference throughout the entire clamping range to clamp the tool. Its structure includes pressure bolts, driving piston, sealing elements, expansion wall, oil chamber and tool holder body. The working principle of the hydraulic tool holder is similar to that of a hydraulic cylinder. The oil pressure is adjusted by a screw to pressurize and clamp the tool. The operator can easily hold the tool using a hex wrench. Hydraulic toolholders offer extremely high runout accuracy and are generally suitable for finishing operations.

United States market for Hydraulic Tool Holders is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
