Hydraulics is a topic in applied science and engineering dealing with the mechanical properties of liquids or fluids. At a very basic level, hydraulics is the liquid version of pneumatics. Fluid mechanics provides the theoretical foundation for hydraulics, which focuses on the engineering uses of fluid properties. In fluid power, hydraulics are used for the generation, control, and transmission of power by the use of pressurized liquids. Hydraulic topics range through some part of science and most of engineering modules, and cover concepts such as pipe flow, dam design, fluidics and fluid control circuitry, pumps, turbines, hydropower, computational fluid dynamics, flow measurement, river channel behavior and erosion.

A complete Hydraulic Tools System is consisting of five components: hydraulic power units, hydraulic actuating components, hydraulic control components, auxiliary components and hydraulic fluids.

Global Hydraulic Tools key players include Actuant, Atlas Copco, SPX Flow, Kudos Mechanical, Greenlee, etc. Global top five manufacturers hold a share over 65%.

US is the largest market, with a share over 30%, followed by Europe and China, both have a share over 45%.

In terms of product, Tightening and Loosening Tools is the largest segment, with a share over 70%. And in terms of application, the largest application is Industrial

Manufacturing, followed by Oil, Gas & Petrochemical, Electric Utility, etc.
