A hydraulic tube end forming machine is a specialized piece of equipment that uses hydraulic power to reshape the ends of tubes. It works by applying precise and controlled hydraulic pressure to deform the tube material, enabling operations such as shrinking, expanding, flaring, tapering, and crimping at the tube ends3. This results in tubes with ends that are better suited for specific connections, fittings, or functional requirements in various applications. With high precision and strong adaptability, it can process different types of tubes made from materials like steel, aluminum, copper, and plastic, playing a crucial role in enhancing the quality and efficiency of tube processing.
