Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Hydric Internal Combustion Engine market.

Hydric internal combustion engine is a type of hydrogen vehicle that uses an internal combustion engine to burn hydrogen as fuel, similar to gasoline or diesel engines. HICE vehicles are different from hydrogen fuel cell vehicles (FCEVs), which use electrochemical conversion of hydrogen to generate electricity for an electric motor.

HICE is a modified version of a traditional spark-ignition engine that can run on pure hydrogen or a blend of hydrogen and other fuels. The main advantage of using hydrogen as a fuel is that it does not produce carbon dioxide (CO₂), the main

greenhouse gas emission of conventional engines. Hydrogen also has a high energy density and can be produced from renewable sources, such as water electrolysis or biomass gasification.
