Hydride-Dehydride (HDH) Titanium Powder is a type of titanium powder produced through the hydrogenation–dehydrogenation process. In this method, titanium metal is first hydrogenated to form brittle titanium hydride, which is then mechanically crushed into fine particles. The hydride is subsequently dehydrogenated under vacuum or inert atmosphere to remove hydrogen, leaving behind titanium powder. HDH titanium powder is widely used in powder metallurgy, additive manufacturing, coatings, and as a raw material for titanium-based alloys.
