A hydro generator, also known as a hydroelectric generator or water turbine generator, is a device that converts the mechanical energy of flowing water into electrical energy. It is a crucial component of a hydroelectric power plant, which harnesses the energy of flowing water to generate electricity. Hydro generators are used to produce clean and renewable electrical power from various sources of water, such as rivers, streams, dams, and waterfalls.

The global shift toward renewable energy sources, including hydropower, has driven the demand for hydro generators. Governments and private entities have been investing in hydroelectric projects to reduce reliance on fossil fuels and mitigate climate change.
