A hydro and vacuum excavation truck is a specialized piece of equipment used in construction and utility maintenance for non-destructive digging. This excavation truck combines the capabilities of high-pressure water (hydro) and a vacuum system to safely and precisely excavate soil, debris, or other materials around sensitive underground utilities. The hydro excavation component uses pressurized water to break up the soil, creating a slurry that is then extracted by the vacuum system into a debris tank. This process allows for accurate excavation without damaging nearby pipes, cables, or other underground infrastructure.

The global Hydro and Vacuum Excavation Truck market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
