The global Hydroacoustic Detector market size is predicted to grow from US$ 319 million in 2025 to US$ 414 million in 2031; it is expected to grow at a CAGR of 4.4% from 2025 to 2031.

A hydroacoustic detector is a sensor based on acoustic principles, which is mainly used to detect the distance, depth and frequency of underwater objects, so as to accurately locate underwater targets. The hydroacoustic detector works by using the propagation characteristics of sound waves in water. When sound waves propagate in water, they will produce reflections, scattering and other phenomena when encountering different media or objects. By receiving and processing these sound wave signals, relevant information about underwater objects can be obtained.

United States market for Hydroacoustic Detector is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
