Hydrocarbon cleaning agents are environmentally friendly solvents with petroleum fractions (such as alkanes, cycloalkanes) or synthetic hydrocarbons as the main components. They remove pollutants such as oil, grease, and metalworking fluids through physical dissolution. They have the characteristics of low toxicity, high flash point (good safety), low volatility, and distillation recovery. They comply with VOCs emission restriction regulations (such as EU REACH) and gradually replace traditional chlorinated hydrocarbons and Freon cleaning agents. They are widely used in degreasing and cleaning of electronic components, precision machinery, automotive parts, aerospace and other industries, and are especially suitable for occasions with high requirements for material compatibility.

United States market for Hydrocarbon Cleaning Agents is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Hydrocarbon Cleaning Agents is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
