The global Hydrocarbon Resin (HCR) for Electronic Packaging market size is predicted to grow from US\$ 52.08 million in 2025 to US\$ 1540 million in 2032; it is expected to grow at a CAGR of 54.6% from 2026 to 2032.

Hydrocarbon Resin (HCR) for Electronic Packaging is an important new material for the production of high-end copper-clad laminates. It is mainly used as the electrical insulation layer of high-frequency copper-clad laminates, and its end applications are in computing centers, robotics, autonomous driving, communications, and semiconductor chip packaging.

Hydrocarbon Resin (HCR) for Electronic Packaging is a specialized synthetic polymer engineered to have low dielectric constant (Dk) and low dissipation factor (Df). These properties are crucial because they ensure minimal signal loss and maintain signal integrity as data rates escalate and operating frequencies move into the millimeter-wave spectrum. Unlike traditional materials, it also offers excellent thermal stability, moisture resistance, and mechanical strength. Beyond PCBs, specific derivatives are used in semiconductor manufacturing, for instance, as high-carbon-content underlayer films in lithography processes to provide exceptional etching resistance.
