Hydrocolloid dressings plaster can be used on burns, wounds that are emitting liquid, necrotic wounds, pressure ulcers, and venous ulcers. These are non-breathable dressings that are self-adhesive and require no taping. The flexible material that they are made from makes them comfortable to wear and suitable for even the most sensitive of skin types. How these dressings work is by creating moist conditions which help to heal certain wounds; the surface is coated with a substance which contains polysaccharides and other polymers which absorb water and form a gel, keeping the wound clean, protecting it from infection, and helping it to heal more quickly. Hydrocolloid dressings are impermeable to bacteria, which is what makes them so effective at preventing infections. They are also long-lasting, biodegradable, and easy to apply.
