Hydrogel heel patches are a type of foot care product that are designed to moisturize and soothe dry, cracked heels. They are made from a soft, gel-like material that contains moisturizing ingredients such as glycerin, urea, and hyaluronic acid. The patches are typically placed on the heel area of the foot and left in place for a period of time, usually around 20-30 minutes. During this time, the hydrogel material helps to hydrate and soften the skin on the heels, making them feel smoother and more supple. Some hydrogel heel patches also contain additional ingredients such as lavender or tea tree oil, which can help to soothe and refresh tired feet. These patches can be a great option for people who suffer from dry, cracked heels or who spend a lot of time on their feet.
