## Abstracts

According to this study, the global Hydrogen Common Rail System market size will reach US\$ 3.4 million by 2031.

A Hydrogen Common Rail System is a high-pressure fuel delivery system designed for hydrogen internal combustion engines (H2 ICEs), similar in concept to diesel or gasoline common rail systems. It features a shared high-pressure rail (or manifold) that supplies hydrogen to multiple injectors, allowing precise control over fuel injection timing, pressure, and quantity. This system improves combustion efficiency, reduces emissions, and enables smoother engine operation by ensuring consistent hydrogen delivery across all cylinders. It plays a critical role in adapting hydrogen as a clean alternative fuel for conventional engine platforms while maintaining performance and reliability.
