Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Hydrogen Cyanide market for 2018-2023. Hydrogen cyanide (HCN) is a chemical compound with the chemical formula HCN. It is a colorless, extremely poisonous and flammable liquid that boils slightly above room temperature, at 25.6 °C.

An important driver of the hydrogen cyanide market is the demand for manufacturing of sodium cyanide and potassium cyanide, used in the mining of silver and gold. Another key driver of the hydrogen cyanide market is its increasing use in production of adiponitrile, which is the precursor to manufacture nylon 66. However, a major restraint the hydrogen cyanide market encounters is the highly toxic nature of the compound, which makes it difficult for transportation or storage.

Over the next five years, LPI(LP Information) projects that Hydrogen Cyanide will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Hydrogen Cyanide market by product type, application, key manufacturers and key regions.

To calculate the market size, LP Information considers value and volume generated from the sales of the following segments:
