Hydrogen Diaphragm Sensors are sensing devices that use a hydrogen-responsive diaphragm or membrane structure to detect hydrogen concentration, permeation, pressure-related changes, or leakage conditions. Hydrogen interaction with the sensing membrane produces measurable mechanical, electrical, optical, or resistance changes that are converted into monitoring signals. Products are designed for hydrogen production, storage, transportation, fuel-cell systems, industrial process equipment, and hydrogen safety monitoring applications.

The industrial chain of Hydrogen Diaphragm Sensors includes upstream sensing membranes, catalytic and functional materials, semiconductor components, electrodes, housings, signal-processing circuits, and packaging materials; midstream covers sensing element design, membrane fabrication, packaging, calibration, assembly, and reliability testing; downstream applications mainly include hydrogen production, storage
