The global Hydrogen-electric Air Taxi market size is predicted to grow from US\$ 216 million in 2025 to US\$ 595 million in 2032; it is expected to grow at a CAGR of 15.9% from 2026 to 2032.

A hydrogen-electric air taxi is a type of urban air mobility (UAM) vehicle that uses hydrogen fuel cells and electric motors to provide short, on-demand passenger transport in urban areas. This type of air taxi combines the benefits of electric propulsion (including low noise and zero emissions) with the advantages of hydrogen fuel cells, such as longer range, faster refueling, and better energy efficiency compared to battery-powered alternatives.

Air taxi is a small commercial aircraft that makes short flights on demand. Electric air taxi comes in several shapes and size. Electric motors replace jet engines, and vertical takeoff and landing (VTOL) aircraft, are designed to avoid the need for long runways. One major advantage of air taxi is the potential to be more efficient than traditional forms of land transportation such as cars, buses, or trains.
