A loader (commonly known as a forklift) is a type of earthwork construction machinery widely used in construction projects such as roads, railways, buildings, hydropower, ports, and mines. It is mainly used to shovel bulk materials such as soil, sand, lime, and coal, and can also perform light shoveling operations on ore and hard soil. By replacing different auxiliary working devices, it can also perform bulldozing, lifting, and loading and unloading operations of other materials such as wood. The hydrogen-powered electric loader uses hydrogen as a power source. It reacts chemically with oxygen in the fuel cell system to generate current. The only products are electricity, heat, and water, which effectively reduces air pollution caused by fuel and achieves zero carbon emissions.

The global Hydrogen Energy Loader market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
