The hydrogen lines of a hydrogen fuel cell vehicle is a pipeline system dedicated to transporting hydrogen. It is responsible for safely and efficiently transporting the hydrogen in the hydrogen storage bottle to the fuel cell stack for power generation. The pipeline is usually made of multi-layer composite materials such as stainless steel, nylon, and stainless steel braided layers. It has high pressure resistance, corrosion resistance, low temperature resistance, and anti-permeation properties, ensuring the safety and stability of hydrogen transmission during vehicle operation. It is one of the key core components of hydrogen fuel cell vehicles.
