The global Hydrogen Generator market size is predicted to grow from US\$ 73.8 million in 2025 to US\$ 144 million in 2031; it is expected to grow at a CAGR of 11.7% from 2025 to 2031.

Electrolysis is a promising option for hydrogen production from renewable resources. Electrolysis is the process of using electricity to split water into hydrogen and oxygen. This reaction takes place in a unit called electrolyze. Electrolyzes can range in size from small, appliance-size equipment that is well-suited for small-scale distributed hydrogen production to large-scale, central production facilities that could be tied directly to renewable or other non-greenhouse-gas-emitting forms of electricity production.

Like fuel cells, electrolyzes consist of an anode and a cathode separated by an electrolyte. Different electrolyzes function in slightly different ways, mainly due to the different type of electrolyte material involved.

Global Hydrogen Generator key players include Air Products, Idroenergy, Teledyne, Hygear, etc. Global top four manufacturers hold a share over 50%.

USA is the largest market, with a share over 30%, followed by China, and Europe, both have a share about 45 percent.

In terms of product, Water Electrolysis is the largest segment, with a share over 75%. And in terms of application, the largest application is Electricity Industrial, followed by Chemical Industrial, etc.
