Hydrogen fuel cell is a kind of fuel cell with phosphoric acid as electrolyte. It uses hydrogen and oxygen as fuels to generate electricity, water, and heat in electrochemical reactions. The working principle of Hydrogen fuel cell is that on the cathode, oxygen is reduced to water through electrochemical reaction, and electrons are released at the same time; On the anode, hydrogen gas is oxidized into water through electrochemical reactions, while absorbing electrons released from the cathode. These electrons flow in external circuits, forming an electric current and generating electrical energy. Hydrogen fuel cells have been widely used in transportation, power supply, unmanned aerial vehicles, internet of things and other fields due to their high efficiency, environmental

protection, safety and other advantages.
