## Abstracts

The global Hydrogen Powered Drone market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Hydrogen drones combine the advantages of fuel cells and lithium batteries, and are not affected by low temperature and high altitude. The energy density is 4 to 6 times that of lithium batteries, and the battery life is long. The power system of the hydrogen fuel cell UAV has no mechanical moving parts except the fan, so the vibration and noise are small, and it can be installed anywhere on the aircraft according to the needs, which has better adaptability, and the time for filling or changing tanks is short. The operation is simple and maintenance-free, and the convenience of use is comparable to that of lithium batteries. The hydrogen pressure sensor can also accurately control the remaining flight time, which can play a greater role in various fields and create greater value.

United States market for Hydrogen Powered Drone is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
