The global Hydrogen Refueling Station (HRS) market size is predicted to grow from US\$ 1988 million in 2025 to US\$ 5310 million in 2031; it is expected to grow at a CAGR of 17.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A Hydrogen Refueling Station (HRS) is an infrastructure designed for filling a vehicle with hydrogen fuel. It can be part of a station for fossil fuel refueling or an independent infrastructure.

An electric vehicle is often compared to a hydrogen vehicle. A hydrogen vehicle can travel up to 600 km with its tank full whereas an electric vehicle (EV) can travel up to a maximum of 400 to 500 kilometers. According to the U.S. Department of Transportation, Level 1 chargers needed about 40 to 50 hours to fully charge a battery electric vehicle (BEV) and approximately 5 to 6 hours to completely charge a plug-in hybrid electric vehicle (PHEV). A hydrogen tank of the fuel cell vehicle can be filled within a few minutes. The high efficiency and reliability of FCEVs over BEVs act as a supporting factor for the hydrogen fueling stations market growth.
