The global Hydrogen Silsesquioxane market size is predicted to grow from US\$ 194 million in 2025 to US\$ 309 million in 2031; it is expected to grow at a CAGR of 8.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Hydrogen Silsesquioxane (HSQ) is a hydrogen-substituted silsesquioxane polymer with the empirical formula $(\text{HSiO}_{1.5})_n$, widely recognized for its cage-like or ladder-type Si–O–Si network structure. Supplied as a solution in organic solvents like MIBK, HSQ is primarily used in micro- and nanofabrication due to its excellent performance as a high-resolution negative-tone electron-beam resist, capable of defining sub-10 nm features. Upon thermal or electron beam curing, HSQ transforms into a dense, SiO₂-like material with a low dielectric constant (~2.9), making it ideal as an interlayer dielectric in semiconductor devices. Its high etch resistance also makes it suitable for use as a hard mask in pattern transfer processes. HSQ's key parameters include solid content, viscosity, bake temperature, film thickness, and resolution capability.

Hydrogen Silsesquioxane (HSQ) is characterized by key parameters that define its performance in advanced lithography and dielectric applications. It typically has a solid content ranging from 0.5% to 15%, with viscosities between 1 to 10 cP, enabling spin-coated films from 20 nm to over 1 μm in thickness. Known for its excellent resolution, HSQ can achieve sub-10 nm features when used as a negative-tone resist in electron beam lithography. Upon curing at 150°C to 400°C, it transforms into a dense SiO₂-like material with a low dielectric constant of around 2.9–3.0. Its performance is influenced

by the solvent system (e.g., MIBK or cyclopentanone), Si–H content, and sensitivity to electron beam dose (typically ~2000–3000 $\mu\text{C}/\text{cm}^2$). HSQ must be stored in dry, cool, and light-protected conditions due to its sensitivity to moisture and UV exposure.
