The global Hydrogenated Diamond-Like Carbon Coating (DLC) market size is predicted to grow from US$ 673 million in 2025 to US$ 891 million in 2031; it is expected to grow at a CAGR of 4.8% from 2025 to 2031.

Hydrogenated Diamond-Like Carbon (DLC) Coating is an amorphous, stable carbon layer that contains hydrogen, offering resistance to both acids and alkalis. It provides excellent protection against oxidation and corrosion, with its high density and amorphous structure preventing corrosive substances from penetrating tools. The chemically inert nature of Hydrogenated DLC significantly reduces the risk of cold welding and material buildup on tool surfaces, enhancing tool performance and longevity.

In the global Hydrogenated DLC coating market, key players include Oerlikon Balzers, IHI Group, and Morgan Advanced Materials, with the top three companies accounting for around 50% of the market share. Europe and North America dominate the market, holding a combined share of approximately 80%. Plasma-Enhanced Chemical Vapor Deposition (PECVD) is the leading production method, representing about 60% of the market, while the primary application is in automobile components, which also accounts for roughly 60% of total demand.

Market trends indicate that the DLC coating industry is growing rapidly in the Asia-Pacific region, particularly driven by increasing demand from China. The application of Hydrogenated DLC coatings is expanding across various sectors, including tools, medical devices, and especially automotive components, as the need for high-

performance, corrosion-resistant coatings continues to grow. Future market growth is expected to be fueled by advancements in coating technologies, the development of cost-effective production processes, and the rising focus on sustainability. Additionally, the environmental benefits of DLC coatings, such as reducing energy consumption and extending the lifespan of components, are driving their adoption in sectors like electric vehicles, aerospace, and renewable energy.

In addition, the shift towards stricter environmental regulations and the growing need for sustainable industrial solutions are accelerating the adoption of Hydrogenated Diamond-Like Carbon (DLC) coatings as an alternative to traditional coatings like hard chrome plating. The low friction properties of DLC not only enhance energy efficiency but also reduce wear and tear on components, contributing to longer equipment lifespans. This trend is expected to drive further growth in sectors such as automotive, aerospace, and electronics, as manufacturers seek to reduce their ecological footprint while improving performance and durability of their products.
