Hydrolyzed animal collagen peptide is a peptide product obtained from animal-derived collagen through a hydrolysis process. Collagen is a protein mainly found in animal connective tissues and has good biocompatibility and bioactivity. The hydrolysis process breaks down collagen into smaller peptide segments or peptide chains, usually composed of dozens of amino acids, with smaller molecular weights and easier digestion and absorption by the human body. Hydrolyzed animal collagen peptides have good water solubility, biological activity, and nutritional and health care functions. They are widely used in food, health products, cosmetics, medicine and other fields. They are often used to promote skin health, enhance joint function, and improve osteoporosis. .
