## Abstracts

The global Hydroperoxide market size is predicted to grow from US\$ 2581 million in 2025 to US\$ 3595 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Hydroperoxides are a class of organic or inorganic compounds containing the  $\text{-OOH}$  (peroxide) functional group, formed primarily through the oxidation of hydrocarbons, alcohols, or ethers, and are highly reactive intermediates widely used as initiators, oxidizing agents, and intermediates in chemical synthesis. In the supply chain, upstream feedstocks include basic petrochemicals (e.g., alkanes, aromatics, and alcohols) and oxygen or air; hydroperoxides are typically produced via controlled autoxidation processes (such as the oxidation of cumene to cumene hydroperoxide or isobutane to tert-butyl hydroperoxide). Midstream processing involves stabilization, purification, and safe handling due to their thermal instability and decomposition risk. Downstream, hydroperoxides are used in the production of phenol and acetone (via the cumene process), polymerization initiators for plastics and rubber, epoxidation reactions (e.g., propylene oxide production), and specialty chemical synthesis. Key end-user sectors include petrochemicals, plastics and polymers, pharmaceuticals, coatings, and chemical intermediates manufacturing. In 2025, global Hydroperoxide output was about 2.5 million tons with 3.2 million tons of capacity, average prices of USD 900-1,700 per ton, and gross margins around 22%.

United States market for Hydroperoxide is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
